

Felix J.E. Comeau: A short biography...

Mr Comeau is a pioneer in the field of breath alcohol testing. Over the past 40 years he has made significant contributions in developing instruments and programs that are now commonplace in the field of traffic safety.

He graduated with an Honours Bachelor of Sciences degree in Biochemistry from McMaster University in Hamilton, Ontario and started his professional career as a forensic scientist with the Royal Canadian Mounted Police Forensic Science Laboratories. He specialized in breath alcohol testing programs and services for law enforcement and judicial purposes for 8 years.

He then joined Alcohol Countermeasure Systems (ACS), a start-up company that he later purchased. The company is credited with the invention and development of the alcohol interlocks and the program services that are used in many countries, including Sweden and France. His first passion is research and he has tirelessly directed the resources of his company to the continued development of the award-winning technology that has been the foundation of breath alcohol testing instruments and alcohol interlock programs.

ACS is now an international group of companies with a subsidiary, Alcolock France in Annecy that serves the European market. It is also working closely with the French judicial program for drink driving offenders and regulated market for buses.

With a strong commitment to France, Mr. Comeau acquired the éthylométrie division of Seres Environnement which is now part of the ACS group. This acquisition will help the company to continue providing more advanced products to the Police.

Under his direction, ACS has expanded significantly, building OEM supply relationships with organizations such as Volvo Trucks, Buses and Cars, as well as major bus manufacturers that supply to the French market. ALCOLOCK is the leading ACS brand, embraced by governments, vehicle manufacturers and public safety groups worldwide.

Mr. Comeau's ultimate vision is to protect lives from the dangers of drink driving by ensuring that every new vehicle is equipped with an alcohol interlock.
